Leadership is leadership: Building health system transformational capacity by leadership training for medical students in an inter-professional setting

Physician participation in interdisciplinary health system leadership is essential to effecting transformative system change. Gaps remain, in particular, due to minimal health system leadership training during medical school.

**Learning Objectives**: To learn about a framework to build a foundation for system transformation by early integration of multi-professional leadership development education for physicians. To understand individual and team learnings as shared by a multi-professional team from four of BC's Health Authorities.

**Activities**: The presenters will discuss the development of a partnership agreement between BC’s Health Authorities and UBC Faculty of Medicine to embed leadership competencies from CCHL LEADS framework within 3rd and 4th year MD curriculum.

**Outcome**: Participants will be aware of the process used to facilitate capacity building for physician leadership across Canada.

**Conclusion**: The purpose of this session will be to explore key issues related to health system transformation through integrating medical students into health system leadership training.
